DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 3-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, lines 3, there is no antecedent basis for "said display device".

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art, Fig. 2, specification pages 1-3, in view of Yuen et al (5,307,173).

Regarding claim 1, the admitted prior art disclose a conventional receiver for displaying received broadcast electric waves including:

a first memory for storing as a past record information representing whether the signal receiver was previously subjected to initial setup; and

an alarm device for alarming the necessity of initial setup of the signal receiver when the connection of a power source plug to an external power source is detected whereby a user can surely perform the initial setup.

The admitted prior art does no teach providing the necessity of the setup when no past record exist in the memory .

Yuen teaches an apparatus having means for indicating a past record in a memory during a setup and for providing necessity of the setup when no past record exist in the memory whereby a user can surely perform the setup (column 25, lines 25-68).

It would have been obvious to one of ordinary skill in the art to modify the admitted prior art with Yuen by using the teaching of Yuen for providing necessity of setup when base on whether or not the past recorded exist the memory thereby preventing error for the setup of the receiver.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art, Fig. 2, specification pages 1-3, in view of Yuen et al (5,307,173) as applied to claim 1 above, further in view of Nagano et al (6,370,317).

The admitted prior art as modified with Yuen fails to specifically teaches using a light emitting element which is provided inside the button and can be actuated to be turned on and off as a warning .

Nagano teaches using light emitting element as a warning device for a set condition of the apparatus (column 16, lines 15-30). It would have been obvious to one of ordinary kill in the art to modify the admitted prior art as modified with Yuen with Nagano by using a light emitting element as taught by Nagano as an alternative to warning means of the apparatus of the admitted prior art as modified with Yuen for providing a warning.

5. Claims 3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art, Fig. 2, specification pages 1-3, in view of Yuen et al (5,307,173) as applied to claim 1 above, further in view of Park et al (5,575,000).

Regarding claims 3 and 5-7 the admitted prior art as modified with Yuen fails to specifically teaches using a second memory for holding a setup frame displayed on said display device after a response to the alarm of said alarm device is received or at the same time when the alarm is made; a third memory for storing district codes and reception channel groups corresponding to the respective district codes as a district code comparative chart.

Park teaches a receiver having a control means and memories for displaying a setup frame and groups of channels corresponding to the input district codes (Figs.

2,3,5,6, column 4) and a channel of a group of channels is selected from a tuner (Figs. 2,3 and 5-6, column 4).

It would have been obvious to one of ordinary skill in the art to modify the admitted prior art with Park by using a control means and memories as taught by Park with the apparatus of the admitted prior art as the second and third memories for storing the setup frame and channels of district areas and for controlling displaying the setup frame and the groups of channels of the district areas and for controlling displaying the setup frame and channels of district areas thereby enhancing the function of the admitted prior art to provide more convenience to the user in selecting a channel for viewing.

Allowable Subject Matter

- 6. Claim 4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to HUY T NGUYEN whose telephone number is (571) 272-7378. The examiner can normally be reached on 8:30AM -6:00PM.

Art Unit: 2616

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Faile can be reached on (571) 272-7375. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
